Get a \$235 rebate for weather-based irrigation controllers!*

West Basin Municipal Water District

Residential Weather-Based Irrigation Controllers (WBICs)

Steps to qualify:

1. Visit www.socalwatersmart.com for a list of devices
2. Purchase a qualifying irrigation controller
3. Submit rebate application and original receipt

Weather-Based Controllers:

- Save up to 13,500 gallons per year
- Reduce water runoff
- Automatically shut off during rainfall

* First come first served or while funding lasts. Discount could be higher depending on retailer participation. Rebates paid up to the cost of the controller

West Basin's Ocean Friendly Commercial Controller Program

West Basin Municipal Water District developed a program that provides free Weather-Based Irrigation Controllers that adjust for the weather for large landscape (+1 acre) customers located within its service area.

The goal is to address the current drought, reduce total water use and reduce runoff into the ocean. HydroEarth Solutions, one of the leading experts in smart irrigation controllers, has been hired to locate and audit large landscapes and install and configure weather-based controllers.

This program is free to qualifying sites.

Please email or call Phil Regli at HydroEarth Solutions for additional information: regli@hydroearth.com, 949.305.9063

The following agencies have provided funding for this program:

Benefits of Weather-Based Irrigation Controllers (WBIC)

These controllers adjust automatically for the weather. They have a historical, weather-based function built into them and adjust the weather conditions using a live sensor. They are easy to program and operate and offer the following benefits:

Live Local Rain Sensor

Shuts down the system during rain storms automatically!

Automatic Schedule Engine

The user never needs to program or schedule the controller. HydroEarth automatically creates completely efficient irrigation schedules based on the local weather conditions and using all 19 Irrigation Association Best Management Practices. The automatic schedule engine is the standard for irrigation scientists

Flow Sensor Ready

Controller can handle up to 10 flow sensors. Flow sensors will alert you when there is a broken sprinkler head.

Installation

HydroEarth will install the equipment and configure the system for you!

Runoff Elimination

HydroEarth configures the controller for zero runoff.

Live Local Weather-Based Data

Real time weather-based data is obtained from a sensor located at the site for microclimate conditions.

Warranty

The controller has a 3 year warranty.

Historical Weather-Based Data

Each controller is configured using historical weather-based data as the baseline.

17 Year Legacy

Thousands of WBICs have been installed and provide the practical certainty that the system is reliable

Industry Adoption

Hundreds of irrigation designers and landscape architects have adopted and use weather-based irrigation controllers.

Program is FREE!

The Ocean Friendly Program is 100% free! The goal is to provide WBICs that adjust automatically to the weather to save you between 15-50% in water use and eliminate runoff.

Program includes:

- Free Audit
- Free Installation
- Free Controllers & Associated Components
- Valued at \$1,350

Qualification for the Program:

To qualify for the West Basin Ocean Friendly Commercial Controller Program you need to:

- Be located within the West Basin Service Area (view map at www.westbasin.org)
- Have a landscape +1 acre in size
- Irrigate this landscape with potable water
